1.

We must set the denominator equal to 0 and solve:

u³ - 27=0 u=3 There is a vertical asymptote at u=3

To find the horizontal asymptote :

To find the vertical asymptote :

First we must compare the degrees of the polynomials.

The numerator contains a 2nd degree polynomial while

the denominator contains a 3rd degree polynomial. Since the polynomial in the numerator is a lower degree than the denominator,

Since the polynomial in the numerator is a lower degree than the denominaton the horizontal asymptote is located at k=0.

the norizontal asymptote is located at k=0. To find the oblique asymptote : Since the degrees of the numerator are less than the degrees of the denominator,

this rational does not have an oblique asymptote
