The domain is all values that d is allowed to be.

Since I can't divide by zero (division by zero isn't allowed, I need to find all values of d that would cause division by zero. The domain will then be all other d-values.

When is this denominator equal to zero? $5 d^4 + 25 = 0$ impossible , then the domain of a is $(-\infty,\infty)$ i.e. $d\in\mathbb{R}$
