The domain is all values that v is allowed to be.

The domain will then be all other v-values.

 $v^2 - 5v + 4 = 0$ 

v=1 or 4 then the domain of m is  $\{v \mid v \neq 1 \text{ or } 4\}$ 

When is this denominator equal to zero?

I need to find all values of v that would cause division by zero.

Since I can't divide by zero (division by zero isn't allowed,
