2.

other edge of rectangle. Area of the rectangle is =  $q \times a$ .

Use perimeter equation and solve for a=  $\frac{288-2q}{2}$ 

a quadratic Parabola:

2. Perimeter of rectangle = 2(q+a)=288 where a is the length of the

5000 -4000 -3000 -

Then reformulate the area  $Q = q \times a = 144 q - q^2$  which turns out to be
