4.

To find the vertical asymptote :

To find the horizontal asymptote :

We must set the denominator equal to 0 and solve:

f³ - 8=0 f=2

f=2 There is a vertical asymptote at f=2

First we must compare the degrees of the polynomials.

The numerator contains a 2nd degree polynomial while the denominator contains a 3rd degree polynomial.

Since the polynomial in the numerator is a lower degree than the denominator, the horizontal asymptote is located at g=0.

To find the oblique asymptote :
Since the degrees of the numerator are less than the degrees of the denominator,
this rational does not have an oblique asymptote
