The domain is all values that d is allowed to be. Since I can't divide by zero (division by zero isn't allowed,

The domain will then be all other d-values. When is this denominator equal to zero?

 $d^4 + 16 = 0$

I need to find all values of d that would cause division by zero.

impossible , then the domain of h is $(-\infty,\infty)$ i.e. $d\in\mathbb{R}$
