$$(v-3) (v-1)^{2}$$
 $(v-3) v (v+2)$
 $(v-1) v (v+4)$

Solution

Apply Long Division.

 $(v-3) v (v+2)$

(v-4)(v-1)(v+3)

1. $v^3 - v^2 - 6v$ has a factor (v - (-2)) compute all other factors:
