$$(s-2) (s+1)^2$$
 $(s-3) (s-2) (s+4)$
 $(s-2) (s+1) (s+4)$
Solution
Apply Long Division.
 $(s-3) (s-2) (s+4)$

(s - 3) (s - 2) s

1. $s^3 - s^2 - 14 s + 24$ has a factor (s - (-4)) compute all other factors:
