Solution

To find the vertex, we look at the coefficients in the function $\mathsf{x}\left(\mathsf{w}\right) = \mathsf{aw}^2 + \mathsf{bw} + \mathsf{c}$ in this equation, a=2 and b=3

The first coordinate of the vertex has the formula: $\frac{-b}{2a}$ now, plugging into formula to get:

$$\frac{-b}{a} = -\frac{3}{a}$$

 $\frac{-b}{2a} = -\frac{3}{2(2)} = -\frac{3}{4}$

$$\frac{3}{2} = -\frac{3}{4}$$

$$(2)$$
 4 econd coordinate of the vertex is $x(-\frac{3}{2}) = 2(-\frac{3}{2})^2 + 3(-\frac{3}{2}) - 7$

The second coordinate of the vertex is $x(-\frac{3}{4}) = 2(-\frac{3}{4})^2 + 3(-\frac{3}{4}) - 7$

ie second coordinate of the vertex is
$$X(-\frac{2}{4}) = Z(-\frac{2}{4})^{-1} + 3(-\frac{2}{4}) - I$$

Therefore, the vertex of the graph of f is $(-\frac{3}{4}, -\frac{65}{8})$
