The domain is all values that x is allowed to be.
Since I can't divide by zero (division by zero isn't allowed,

I need to find all values of x that would cause division by zero.

When is this denominator equal to zero? $5 x^4 + 16 = 0$

The domain will then be all other x-values.

impossible , then the domain of k is $(-\infty,\infty)$ i.e. $x \in \mathbb{R}$
