## Solution

To find the vertex, we look at the coefficients in the function  $\mathsf{e}\left(\mathsf{q}\right) = \mathsf{aq}^2 + \mathsf{bq} + \mathsf{c}$ 

in this equation, a = 3 and b = 3The first coordinate of the vertex has the formula:  $\frac{-b}{2a}$  now, plugging into formula to get:

 $\frac{-b}{2a} = -\frac{3}{2(3)} = -\frac{1}{2}$ 

$$=-\frac{3}{2(3)}=-\frac{1}{2}$$
e second coordinate of the vertex is  $e(-\frac{1}{2}) = 3(-\frac{1}{2})^2 + 3(-\frac{1}{2}) - 4$ 

The second coordinate of the vertex is  $e(-\frac{1}{2}) = 3(-\frac{1}{2})^2 + 3(-\frac{1}{2}) - 4$ 

 $=-\frac{19}{4}$ 

Therefore, the vertex of the graph of f is  $(-\frac{1}{2},-\frac{19}{4})$
