3.

q³ - 125=0 q=5 There is a vertical asymptote at q=5 To find the horizontal asymptote : First we must compare the degrees of the polynomials.

We must set the denominator equal to 0 and solve:

To find the vertical asymptote :

To find the oblique asymptote :

The numerator contains a 2nd degree polynomial while the denominator contains a 3rd degree polynomial. Since the polynomial in the numerator is a lower degree than the denominator, the horizontal asymptote is located at w=0.

Since the degrees of the numerator are less than the degrees of the denominator,

this rational does not have an oblique asymptote
