The domain is all values that y is allowed to be. Since I can't divide by zero (division by zero isn't allowed,

The domain will then be all other y-values.

 $4 y^4 + 9 = 0$ 

When is this denominator equal to zero?

impossible , then the domain of b is  $(-\infty,\infty)$  i.e.  $y \in \mathbb{R}$ 

I need to find all values of y that would cause division by zero.
