1. Which of the following is correct intersection plot:

$c = e^2 + 2e + 2$

$c = 5e - \frac{41}{4}$

$v = 3a - 2a^2$

$v = 3a - 18$

$e = -p^2 - 3p - 3$

$e = \frac{37}{4} - 6p$

$w = 2d^2 - 3$

$w = -13$

Solution

$e = -p^2 - 3p - 3$

$e = \frac{37}{4} - 6p$

$\left\{ , -1, -3, -3, -6, \frac{37}{4} \right\}$
