2.

The domain is all values that i is allowed to be.
Since I can't divide by zero (division by zero isn't allowed,
I need to find all values of i that would cause division by zero.
The domain will then be all other i-values.
 When is this denominator equal to zero?
$i^2 - 4 = 0$
$i = \pm 2$ then the domain of m is $\{i \mid i \neq 2 \text{ or } -2\}$
