1. Which of the following is correct intersection plot:

$g = c^2 + 2c + 3$

$g = 5c - \dfrac{37}{4}$

$r = t^2 + 3t + 2$

$r = 6t + 20$

$q = 2c^2 - 2c - 1$

$q = 6c - 19$

$a = -2t^2 - 3t - 1$

$a = 27 - 15t$

Solution

$q = 2c^2 - 2c - 1$

$q = 6c - 19$
